HeyGen's Webhook Events

Receive real-time notifications for avatar video events

Webhook events are how the **HeyGen** notifies your *endpoints* when a variety of interactions or events happen, including when avatar video processing *succeeds* or *fails*. Webhook events are sent by HeyGen as POST requests to your webhook endpoint.

Getting Started

List Available Webhooks Events

See detailed API reference
Let's quickly get started with webhooks by listing all available webhook events in HeyGen API.

Bash   Response

```
curl --request GET \
     --url https://api.heygen.com/v1/webhook/webhook.list \
     --header 'accept: application/json' \
     --header 'x-api-key: <your-api-key>'
```

Basically, HeyGen can make requests to your endpoint when 'Video succeeds' and
